

Organizations of all shapes and sizes are seeing significant reductions in troubleshooting tickets and onsite technician response requirements, up to 90% in some cases. This is only possible because of the machine learning driven by Mist AI. It replaces manual troubleshooting tasks with automated wireless operations to make Wi-Fi predictable, reliable, and measurable and provides unique visibility into user service levels. And Mist AI is extendable to the Juniper Wired environment, opening new doors for deployment, managing and troubleshooting data center infrastructure.

Leader of Leaders in the 2022 Gartner Magic Quadrant For Wired and Wireless LAN Infrastructure

Juniper Mist™ is the first to bring a conversational assistant to enterprise networking, driven by Mist AI. Marvis enriches its natural language processing (NLP) capabilities with natural language understanding (NLU) to offer a Conversational Assistant that understands user intent and delivers improved value and quality of returned results. The power of the Marvis conversational assistant is that it can contextualize requests to accelerate troubleshooting.

The only other thing you need is an experienced, regional partner with the capabilities of assisting you in solution design and implementation. ATS has been a technology solutions partner to organization throughout the Mid-Atlantic for over 20 years. We provide connectivity and coverage assessments, TCO analysis, deployment, configuration and maintenance of enterprise infrastructure solutions in the Data Center and throughout the campus environment.
