Info-Matrix Corporation

Who We Are

Info-Matrix Corporation is an Information Technology provider offering a wide range of services, including Project Management, Application Development, Business Systems Engineering, Data Management, and Consulting. Info-Matrix helps businesses grow and become more profitable while providing an exceptional customer experience. Based in Central Pennsylvania, Info-Matrix has over 25 years of experience delivering business-focused solutions to companies and government agencies of all sizes.

Since 1996, Info-Matrix has focused largely on the government sector with an emphasis in human services IT projects. This includes Medicaid eligibility, welfare case management, and child support enforcement systems.

From Pennsylvania to Texas to Alaska, Info-Matrix has broad experience at the federal, state, and local levels. We have demonstrated success managing the challenges associated with working across jurisdictional, regional, and functional boundaries.

Our strength lies in our staff. Info-Matrix has a workforce that is diverse and includes experts in various technologies. We hire outstanding professionals who have distinguished themselves. We seek out those who enjoy learning, and we invest heavily in professional development. Our professionals are grounded in reality and remain experts in emerging technologies and trends. The Info-Matrix team could be your X-FACTOR.

We believe that all organizations, regardless of size, deserve empowering technology solutions that enable innovation.

Our Expertise

Application Design and Development

Our goal is to help you realize business value as quickly as possible. Sometimes, that means developing complex, integrated, enterprise-level systems. Sometimes, it means developing a quick fix for a single problem.

Project Planning and Management

Our team has the experience, the tools, and standard industry approved techniques to define and control scope, identify and mitigate risk, and manage cost and timelines.

Federal, State, and Local Governments

Info-Matrix professionals have extensive experience in the government IT sector. We recognize that governments have specific development, documentation, approval, and production standards, and we follow them.

Our Mission

In both the private and public sectors, our mission is to be a long-term strategic advisor and consulting partner, committed to quality and an exceptional customer experience.

Our Vision

We will be:

- a trusted advisor to our customers
- a champion for our consultants
- a supporter of our community

At Info-Matrix, we know your business

Governments have unique obligations and constraints – we get that. And federal, state, and local governments aren't the same. Health and human services organizations are evolving and integrating so quickly that technology implementations must be swift, secure and adaptable. Private sector businesses can't afford "nice to have" technology; deployments must quickly improve the bottom line or they're just not worth the time, effort or risk.

Info-Matrix is certified by several government entities.

- Women-Owned Small Business (WOSB)
- Pennsylvania Small Diverse Business (SDB)
- Certified Pennsylvania Small Business
- Virginia Small, Women-owned and Minority-owned Business (SWAM)
- Certified by the Women's Business Enterprise National Council (WBENC)

Info-Matrix is a small business partner to some of the most respected companies in the world.

- Deloitte Consulting
- KPMG
- Maximus
- Microsoft
- Unisys
- Amazon AWS

Business applications have to work. Simple, right? Not really. That's where we come in.

Key Service Features

Application Design and Development

Business organizations are increasingly reliant on their applications to deliver superior service to customers. We focus on defining the requirements up front by asking the right business questions. This way, you end up with a well-built application that will move your business forward.

Our goal is to drive measurable improvements to maximize bottom-line value as quickly as possible. This may mean developing complex, integrated, enterprise-level systems or figuring out a solution for a single one-off business problem.

We take the time to evaluate the business processes and supporting IT systems and environments so that we deliver a world-class application that integrates seamlessly. We implement the most current, forward-thinking tactics to ensure your application is secure, well maintained, and scalable.

In addition to building from scratch, we have extensive experience modernizing and migrating legacy applications to current technologies. We routinely apply our application development services in client-server, web-based and mobile platforms. We are particularly adept at designing and developing applications, and we offer a full range of services to improve your return on IT spend.

Project Planning and Management

Our PMP-certified professionals can manage your Information Technology and business team, multi-vendor undertakings, or a project you've retained Info-Matrix to implement. Some of the best-practice tools that may benefit your project include Information Technology Infrastructure Library (ITIL) and Project Management Book of Knowledge (PMBOK).

Info-Matrix project managers are supported by business analysts who can map your current processes to identify improvements. We can elicit, analyze, communicate, and validate functional and technical specifications to make sure that the proposed solution gets to the root of the problem you're trying to solve.

You tell us what you need. Is it a simple time/task schedule or a complete blueprint that you can implement yourself? A full-time project manager to plan, coordinate, document and report? An entire team to help identify the business problem, develop a solution, and see the project through to completion? We can do all of that and more.

Info-Matrix has experience helping organizations design and create project management offices. We can help conduct a cost/benefit analysis to see if dedicated project management professionals would benefit you. We can develop a governance model, position descriptions, qualification levels, policies, operating frameworks, and more.

Federal, State, and Local Governments

Units of government conduct vital business on behalf of citizens, and citizens demand (and deserve) the greatest return from their tax dollars. From helping the most vulnerable of our neighbors to keeping drinking water safe and highway bridges strong, there's little room for error in delivering government services.

Info-Matrix understands the unique challenges faced by public professionals and technologists. Priority, budget, timing, procurement, and transparency concerns are just the beginning of the added complexity in government Information Technology. And while there are many commonalities, different levels of government face different challenges. We understand that.

We know what it's like to keep existing mainframe, COBOL, client-server, and web-enabled systems running smoothly, even when the conditions are not ideal. Our professionals can provide maintenance services to help keep you in the game; we can be your after-hours and on-call professionals when your own staffing is tight. We can provide a swift solution to solve an immediate problem, or we can provide comprehensive services to evaluate, design, and implement a modernization plan.

Our entire government practice is strong, and Info-Matrix has extraordinary expertise in working with health and human services agencies. Info-Matrix professionals have delved into programing with county governments, state departments, and federal clients.

We could be your X-FACTOR.
