

Tanium Risk Assessment: Know your IT risk score

Assess the risk of all your endpoints against multiple vectors — vulnerabilities, threats, compliance, patch status, sensitive data, and susceptibility to large-scale breach patterns, such as Log4j — in just 5 days at no cost.

Five days to a comprehensive score for your organization's IT security

To address the critical need for insights into cyber risk, Tanium offers the Tanium Risk Assessment. This is a no cost, five-day assessment powered by Tanium Cloud.* Here are the three steps in the risk assessment:

1. Monitor your global IT infrastructure in action
2. Analyze risks across that infrastructure
3. Receive a detailed, actionable summary that IT and business users can use to address security shortfalls

Setting up the Tanium Risk Assessment service is quick and easy. It typically requires just five hours of engagement with a company's IT organization. Most of that work is completed on the first day.

Once NDAs are signed, Tanium securely connects its Tanium Cloud services to your organization's IT infrastructure and analyzes endpoints across all your networks, including endpoints on premises, in the cloud, and remote locations such as employee home offices. It then monitors network activity, discovers and analyzes patch status, suspicious traffic patterns, and other vulnerabilities, and compiles a comprehensive report with an overall risk score.

The Tanium risk score is a three-digit score, essentially a credit score for your organization's cyber defenses.

The report provides clear direction for IT organizations to address critical vulnerabilities and security weaknesses. It also highlights strengths, giving management teams confidence in the security investments so far. Finally, the report compares your organization to your industry peers, so you can get a sense of how likely a determined attacker would be successful at targeting you along with your peers.

Best of all, the risks assessment and report are provided without obligation. Share the report with your IT organization and executive team as you like.

With Tanium's risk assessment, one organization found:

700K
high/critical-risk vulnerabilities

1.3M+
failed CIS conditions

5K+
endpoints running end-of-life operating system versions

Know your IT risk posture

Request a five-day, no-cost risk assessment to get a comprehensive view of risk posture across your organization.

*Support for on-premises customers is available

Tanium is the platform that organizations trust to gain visibility and control across all endpoints in on-premises, cloud, and hybrid environments. Our approach addresses today's increasing IT challenges by delivering accurate, complete, and up-to-date endpoint data — giving IT operations, security, and risk teams confidence to quickly manage, secure, and protect their networks at scale. Tanium's mission is to help see and control every endpoint, everywhere. That's the power of certainty.
