

Total Privileged Account and Session Management (Total PASM+) for State and Local Government

See it, centralize it, and secure it with Total PASM+

State and local organizations are under pressure to modernize services, secure distributed operations, support remote and third-party access, and improve resilience with limited staff and resources. Privileged risk now extends well beyond administrator accounts to include service accounts, secrets, vendor access, machine identities, and hidden paths to privilege that can disrupt essential public services.

BeyondTrust Total PASM+ helps state and local organizations reduce privileged account and access-related risk while improving control, auditability, and operational efficiency. By combining privileged credential management, session governance, and identity visibility, teams can better identify exposure, secure access, and prioritize remediation across cloud, on premises, and operational environments.

With Total PASM+, state and local teams can discover privileged assets, vault and rotate credentials, govern privileged sessions, and uncover cross-platform True Privilege so they can reduce attack surface and strengthen accountability.

Unlock Powerful Total PASM+ Outcomes

Discover and Onboard Privileged Assets

Continuously identify and onboard privileged accounts, service accounts, secrets, SSH keys, and machine identities across distributed environments.

Reduce Standing Privilege

Support just-in-time access and stronger credential controls to limit persistent access and reduce exposure across agencies and departments.

Illuminate Hidden Privilege

Uncover cross-platform True Privilege, excessive entitlements, and dangerous access overlaps that increase risk across essential systems.

Automate Credential Management

Vault, rotate, and manage privileged passwords, secrets, and keys while reducing hardcoded credentials and manual administration.

Apply Powerful Session Management

Control, monitor, and audit privileged sessions for employees, administrators, contractors, and vendors accessing sensitive systems.

Strengthen Audit and Oversight Readiness

Leverage privileged account, credential, and session visibility to support investigation, reporting, and compliance efforts.

Strategic Alignment

- Supports modernization and resilience goals by helping teams secure privileged access across distributed agencies, departments, and essential service environments.
- Improves control over third-party and remote access with stronger governance for vendors, contractors, and administrators supporting critical systems and infrastructure.
- Strengthens audit and risk reduction efforts by improving visibility into privileged identities, session activity, and hidden access paths across the environment.
