

Tanium Autonomous IT Platform

The single, unified platform for endpoint management and security.

Endpoints are expanding. Vulnerabilities are surging. AI is uncovering exposures faster than teams can act. Reactive models built on fragmented tools cannot keep pace. Instead, they're widening the gap between insight and action.

The Tanium Autonomous IT Platform is the single, unified platform for endpoint management and security. Only Tanium enables customers to transform their IT operations and security with autonomous solutions driven by AI, real-time intelligence, and Tanium's Linear Chain Architecture.

A platform that accelerates insights to action

Accelerate decision agility

- Elevate operations with AI agents that observe, reason, and act with human oversight.
- Derisk and unblock change with predictive AI, real-time intelligence, and governed automation.
- Efficiently execute endpoint changes with speed at scale via Tanium's Linear Chain Architecture.

Save costs

- Manage endpoints, exposure risks, and security operations from a single, unified platform.
- Identify, prioritize, validate, and remediate across IT, mobile, OT, and cloud assets in real time.
- Orchestrate workflows via deep integrations with Microsoft, ServiceNow, Splunk, Google, and other leading platforms.

Strengthen resilience

- Strengthen posture with continuous, closed-loop security, and expert-led threat hunting.
- Accelerate response with proactive insights, dynamic risk scoring, and real-time scoping and validation.
- Act with confidence: governance ensures trustworthy data drives every insight and automation.

Single Platform for Both IT Operations and Security

A solution that delivers business impact

The [2026 Forrester Consulting Total Economic Impact™ \(TEI\) study](#) commissioned by Tanium, determined that the composite global enterprise using the Tanium Autonomous IT Platform realized the following business benefits by year three:

75%

Reduction in MTTR
for endpoint incidents
needing remediation

95%

Improvement in patching
efficiency workstations;
65% improvement
for server patching

70%

Improvement in
productivity by unifying
endpoint management
and security

235%

235% ROI and \$20.1M in total
benefits — with a payback
period of under 6 months

A portfolio that simplifies operations and enhances value

Tanium Autonomous IT enables autonomous solutions with a flexible approach. AI and real-time intelligence enrich third-party applications, enabling teams to achieve more in tools they already own.

SUMMARY

A Single, Unified Platform to Transform Endpoint Management and Security

The Tanium Autonomous IT Platform brings IT operations and security together. Reactive approaches and sprawling toolsets increase risk, delay, and technical debt. Tanium Autonomous IT helps teams prevent issues, adapt quickly, and save both time and costs. Teams can reduce risk, improve value, and deliver exceptional user experiences—all from single, unified platform driven by AI, real-time intelligence, and Tanium's Linear Chain Architecture.
